Declaration of conformity*:

Features: These garments are Personal Protective Equipment (PPE). They bear the CE marking as they comply with the requirements of the EU-Regulation 2016/425 (and following amendments) implemented by issuing within the Official Register of the European Union by September 9th, 2016 relevant to Personal Protective Equipment. Moreover, these garments comply with the requirements of the European Technical Standards EN 13688:2013+A1:2021 "General requirements".

Source of Information: Beuth-Verlag GmbH, 10787 Berlin, www.beuth.de

(*The complete declaration of conformity, you can find at: www.big-arbeitsschutz.de)

PPE category 1, small risks.

EN 13688:2013+A1:2021 Protective clothing – General requirements

Intended use: These garments are suitable to be used in dusty and dirty condition, since they can provide the user with protection against unclean environment.

These PPE items do NOT protect from:

- Chemical hazards
- Caught-in hazards in presence of moving parts
- Thermal hazards
- Fire crossing and extinguishing hazards
- Hazards different from the ones specified above

Identification and selection: The selection of suitable garments must be made, based on the specific workplace requirements, the type of hazards and the relevant environmental conditions. The employer is responsible for the identification and selection of the suitable and adequate PPE. Therefore, it is opportune to verify the suitability of this garment to your requirements before use.

Warnings: Make a visual check of the garment before use, to verify it is in perfect conditions, clean and intact and does not show any damages. In case of visible damages (e.g. unstitched or broken seams, breaks, flaws) the garment must be replaced. All closing-elements must be functioning. The garment can fulfil the purpose of protection only, if worn correctly and in sound condition. It must be stressed out, that the identified technical standards of the PPE might be impacted by abrasion, washing, staining etc. Alterations of PPE are not allowed. Preserve this user instruction manual throughout the entire life of PPE. We decline any responsibility for possible damages and/or consequences arising from improper use.

Instructions for use: If the garment is damaged, please do NOT repair it, but change to a new one.

Instructions for storage, maintenance and transportation: Store in the original packing, protected from sources of light and heat sources (e.g. sun). The garment must be preserved in a dry place. Avoid the contact with solvent which might cause alteration of the products features. For transportation, do not take garments out of the original packing, but keep them in.

Cleaning:

Wash with same or similar colours. Do not use softener! Reshape while damp. Line dry. Do not clean with solvents. Professional dry- or wet-cleaning is not allowed. Any kneepads must be detached out of knee-pockets before washing the garment. The number of washing-cycles is not the only influencing factor of durability of garments. The life-span is also determined by usage/application, care/maintenance, disinfection, storage et cetera. We recommend a usage within 3 years after bringing the product into service, obeying an appropriate storage and intended use. In case the PPE shows fading of colour, damage of the retroreflective material or any other flaws at an earlier date, the PPE must be replaced promptly.

Production of the PPE: **xx/2023**

Recycling, safe destruction and elimination: This garment can be thrown in a regular garbage can.

Marking: a label is sewn to the inside of the garment, with the following marking:

The CE marking certifies the compliance with the essential safety requirements set forth by the Regulation (EU) 2016/425.

Thermohemd

(436X) DAYTON (art.-no. = example)

M (example. Indicates the size on a separate size-label)
